KEY PRODUCT FEATURES

WHAT ARE YOU INVESTING IN?

The Fund is structured as an umbrella fund offering Shares in the Sub-Fund for investment.
- ▶ Investment Objective
The Sub-Fund aims to provide total return primarily in a diversified portfolio of Investment Grade and Non-Investment Grade rated fixed income (e.g. bonds) and other similar securities either issued by companies which have their registered office in Emerging Markets around the world, primarily denominated in US Dollar, or which are issued or guaranteed by governments, government agencies, quasi-government entities, state sponsored enterprises, local or regional governments (including state, provincial, and municipal governments and governmental entities) and supranational bodies of Emerging Markets.
- ▶ For Distribution Share Classes of a Sub-Fund (if made available for subscription), distributions out of capital (if any) will reduce the Net Asset Value of the relevant Share Class of the Sub-Fund.

Refer to paragraphs 1 and 3.1 “Investment Objectives, Focus and Approach” of the Singapore Prospectus and section 3.2 “Sub-Funds details” of the Luxembourg Prospectus for further information on features of the product.

INVESTMENT STRATEGY

The Sub-Fund may invest more than 10% and up to 30% of its net assets in securities issued by or guaranteed by a single sovereign issuer with a Non-Investment Grade credit rating. This is due to the fact that the Sub-Fund’s reference benchmark, the JP Morgan EMBI Global Diversified, may contain

sovereign issuers that may have a Non-Investment Grade rating. The Investment Adviser may decide to invest in a specific Non-Investment Grade sovereign issuer and/or to overweight (in relation to the reference benchmark) a particular Non-Investment Grade sovereign issuer. The Non-Investment Grade sovereign issuers that the Sub-Fund may invest up to 30% of its net assets in may change at any time as a result of: changes in credit ratings, changes in the Sub-Fund's benchmark weights, the Investment Adviser's decision to allocate a higher or lower proportion of the Sub-Fund's net assets to a particular benchmark constituent and/or market movements. Investment in onshore Chinese fixed income securities include, but are not limited to, onshore fixed income securities denominated in RMB, issued within the People's Republic of China ("PRC") and traded on the China Interbank Bond Market ("CIBM"). The Sub-Fund may invest in the CIBM either through Bond Connect and/or the CIBM Initiative. The Sub-Fund may invest up to 10% of its net assets in onshore Chinese bonds issued by, amongst other, municipal and local governments, companies and policy banks.

The Sub-Fund may invest up to 10% of its net assets in convertible bonds (excluding contingent convertible securities). The Sub-Fund may invest up to 10% of its net assets in contingent convertible securities, however this is not expected to exceed 5%. The Sub-Fund may invest up to 10% of its net assets in units or shares of UCITS and/or other Eligible UCIs (including other sub-funds of HSBC Global Investment Funds).

The Sub-Fund may use financial derivative instruments for hedging purposes and efficient portfolio management purposes. The Sub-Fund may also use, but not extensively, financial derivative instruments for investment purposes. The Sub-Fund may invest up to 10% of its net assets in Total Return Swaps, however this is not expected to exceed 5%.

The Sub-Fund can enter into Securities Lending transactions for up to 29% of its net assets, however, it is expected that this will not exceed 25%.

The Sub-Fund is actively managed and does not track a benchmark. The Sub-Fund has an internal or external target to outperform the reference benchmark, JP Morgan EMBI Global Diversified.

KEY RISKS

WHAT ARE THE KEY RISKS OF THIS INVESTMENT?

- ▶ The value of the Sub-Fund's assets may rise or fall due to normal market fluctuations and investors may not get back all of their investment.

Refer to paragraph 6 "Risks" of the Singapore Prospectus and sections 1.4 "General Risk Considerations" and 3.3 "Sub-fund specific risk considerations" of the Luxembourg Prospectus for further information on risks of the product.

MARKET AND CREDIT RISKS

- ▶ You are exposed to Interest Rate Risk
Bonds and other fixed income securities are more susceptible to fluctuation in interest rates and may fall in value if interest rates change.
- ▶ You are exposed to Credit Risk
A bond or money market security could lose value if the issuer's financial health deteriorates.

- ▶ You are exposed to Market Risk
The value of investments may be affected by uncertainties such as international, political and economic developments or changes in government policies in Emerging Markets.
- ▶ You are exposed to Foreign Exchange Risk
Changes in currency exchange rates could reduce or increase investment gains or investment losses, in some cases significantly.

LIQUIDITY RISKS

- ▶ The Sub-Fund is not listed in Singapore and there is no secondary market for its Shares. You can only redeem your investment on a Dealing Day through the Sub-Fund.
- ▶ Investment of the Sub-Fund's assets in relatively illiquid investments may restrict the ability of the Sub-Fund to dispose of its investments at a price and time that it wishes to do so. This may result in a loss to the Sub-Fund.

PRODUCT-SPECIFIC RISKS

- ▶ You are exposed to Emerging Markets Risk
Investing in emerging markets involves a greater risk of loss than investing in more developed markets due to, among other factors, greater political, tax, economic, foreign exchange, liquidity, market volatility (such as interest rate and price volatility) and regulatory risks.
- ▶ You are exposed to China Interbank Bond Market
Investments in the CIBM are subject to these risks: market and liquidity risks, Chinese local credit rating risks, counterparty and settlement risk, operational risk, quasi-Government/local Government bond risk, urban investment bonds risk and regulatory risk.
- ▶ You are exposed to Contingent Convertible Securities (CoCos) Risk
Contingent convertible securities are risky and highly complex instruments that are comparatively untested. Depending on their category, income payments may be cancelled, suspended or deferred by the issuer and they are more vulnerable to losses than equities. Investment in CoCos is subject to trigger level risk, conversion risk, valuation and write-down risk, coupon payments and coupon cancellation risk, capital structure inversion risk, call extension risk, subordinated instruments risk, and unknown risk. This may result in a loss to the Sub-Fund.
- ▶ You are exposed to Derivative Risk
Financial derivative instruments may be leveraged and their prices can be very volatile. Investment in these instruments may result in losses in excess of the original amount invested. If the issuers of the derivative instruments default, or such securities or their underlying assets cannot be realized, or perform badly, investors may suffer substantial or, in certain cases, total loss of their investments. Governmental regulation and supervision of transactions on the OTC markets is generally lesser than of transactions on organised exchanges. Thus, investing in OTC derivatives involves higher counterparty risk and liquidity risk.
- ▶ You are exposed to Total Return Swaps Risk
A sub-fund may utilise Total Return Swaps to, *inter alia*, replicate the exposure of an index or to swap the performance of one or more instruments into a stream of fixed or variable rate cash-flows. Investing in Total Return Swaps may involve counterparty risk.
- ▶ You are exposed to Non-Investment Grade Debt Risk
Credit risk may be greater for Non-Investment Grade securities as they may be subject to a higher risk of default and greater price volatility. Investment grade bonds may be subject to the risk of being downgraded to non-investment grade bonds. In the event of downgrading, the Sub-Fund's investment value in the relevant security may be adversely affected.
