

HSBC Global Investment Funds

GLOBAL EQUITY VOLATILITY FOCUSED

Monthly report 30 April 2023 | Share class AM2

Investment objective

The Fund aims to provide long term capital growth and income by investing in a portfolio of shares worldwide.

Investment strategy

The Fund is actively managed. In normal market conditions, the Fund will invest at least 90% in shares of companies of any size that are based in, or carry out the larger part of their business activities in, both developed markets and emerging markets. The Fund seeks a portfolio volatility which is lower than that of the MSCI All Country World Index. The Fund uses a quantitative multi-factor investment process to identify stocks from a universe of investable shares, and ranks them from the least attractive to most attractive based upon certain factors, such as value, quality, momentum, low risk and size. The process makes use of proprietary systematic, defensive portfolio construction techniques aiming to maximize risk-adjusted return whilst reducing volatility and drawdowns during period of market turbulence. The Fund can invest up to 20% in China A and China B-shares. For China A-shares, up to 10% through the Shanghai-Hong Kong Stock Connect and/or the Shenzhen-Hong Kong Stock Connect, and up to 10% in CAAPs. The Fund may invest up to 10% in a combination of participation notes and convertible securities, and up to 10% each in securities issued or guaranteed by single sovereign issuers with a non-investment grade rating, REITs and other funds. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

Share Class Details

Top 10 holdings exclude holdings in cash and cash equivalents and money market funds.

Monthly performance commentary

Market Review

Global equities edged higher in April, despite noisy economic data. Better-than-feared Q1 earnings numbers helped support risk appetite, particularly in developed markets, with many sectors seeing positive earnings surprises. At a regional level, US equities made minor gains as signs of slowing economic growth appeared in the economic data. The key event was the collapse of First Republic bank at the end of April which marked the fourth regional bank in the US that collapsed since March. On the back of increasing consumer confidence and an improvement in the April services PMI, value-inclined European equities rose this month. UK equities also had positive price performance, led by Financials which rebounded after being beaten down in March. In the UK, we saw a similar divergence between the services and manufacturing sectors as in the rest of Europe with services PMI notching up higher and manufacturing PMI falling. Meanwhile, equities in Asia Pacific ex Japan and Emerging Markets declined as renewed geopolitical tensions with the West weighed on investment sentiment towards mainland China.

Factor Performance

In April, as of month end, global alpha style performance was positive. Within alpha factors, the defensive Low Risk factor continued to outperform amidst risk-off sentiment in the markets. The cyclical Value factor also performed relatively well, rebounding in April while growth-oriented counterparts, especially tech stocks, were out of favour. Meanwhile, the defensive Quality factor was relatively muted at month end and the dynamic Industry Momentum finished below the line, giving back the rewards gained in the previous month. Finally, the cyclical Size factor lagged throughout the month as markets continued to favour larger cap, less volatile stocks in the risk-off environment.

Fund Commentary

In April, as of month end the fund outperformed its market cap weighted index. Our exposure to Styles contributed to performance. On a portfolio level, our exposures to Low Risk, Value and Quality contributed to performance, while our exposures to Size and Industry Momentum weighed on performance.

Industries

On an industry basis, our overweight allocations to Insurance and Utilities coupled with our underweight exposure to Software & Services contributed to performance. Conversely, our underweight exposure to Financial Services coupled with our overweight allocations to Technology Hardware & Equipment and Food, Beverage & Tobacco weighed on performance.

Countries

On a country basis, our overweight allocations to Japan and India coupled with our underweight exposure to Netherlands contributed to performance. Conversely, our overweight allocations to Hong Kong and Malaysia coupled with our underweight exposure to Sweden weighed on performance.

Stock Level

On a stock level basis, our underweight exposure to Tesla Inco coupled with our overweight allocations to Meta Platforms Inco and Novartis AG contributed to performance. Conversely, our overweight allocations to Texas Instruments Inco, Cisco Systems Inco and Keysight Technologies Inco weighed on performance.

Risk Disclosure

- Different investment styles typically go in and out of favour depending on market conditions and investor sentiment.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Investment involves risk. Past performance figures shown are not indicative of future performance. Investors should read the prospectus (including the risk warnings) and the product highlights sheets, before investing. Daily price change percentage is based on bid-bid price.

Benchmark disclosure

The Investment Advisor will use its discretion to invest in securities not included in the reference benchmark based on active investment management strategies and specific investment opportunities. It is foreseen that a significant percentage of the Fund's investments will be components of the reference benchmark. However, their weightings may deviate materially from those of the reference benchmark. Any deviations with respect to the benchmark are monitored within a comprehensive risk framework, which includes monitoring at sector level. The deviation of the Fund's performance relative to the benchmark is monitored, but not constrained, to a defined range.

AM3OAUD	26 June 2014	LU1066052546	AUD	USD 5,000	11.21	0.800%	Distributing
AM3OSGD	26 June 2014	LU1066053197	SGD	USD 5,000	11.71	0.800%	Distributing

Different classes may have different performances, dividend yields and expense ratios. For hedged classes, the effects of hedging will be reflected in the net asset values of such classes. Expenses arising from hedging transactions may be significant and will be borne by the relevant hedged classes. Hedged class performs the required hedging on a best efforts basis.

The above table cites the last dividend paid within the last 12 months only. Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may comprise of distributed income, capital, or both.

The calculation method of annualised yield prior to August 2019 is the simple yield calculation: (dividend amount / NAV per share or units as of ex-dividend date) x n; The calculation method of annualised yield from August 2019 is the compound yield calculation: $((1 + (\text{dividend amount} / \text{ex-dividend NAV}))^n) - 1$, n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12. The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.

Investors and potential investors should refer to the details on dividend distributions of the Fund, which are available on HSBC Asset Management (Singapore) Limited website.
